Synthetic Study Alpha

Methods

The trial enrolled 120 adults. Participants were randomized equally: 60 to Alpha care and 60 to usual care.

The prespecified primary outcome was time from order entry to medicine delivery.

Eligibility

Adults with a new medicine order were eligible at two community clinics.

All participants provided written consent before assignment.

Synthetic Study Alpha - Results

In Alpha care, median delivery time was 18 minutes (IQR 12-24).

In usual care, median delivery time was 24 minutes (IQR 16-30).
