Synthetic Study Beta

Participants

The Beta trial enrolled 80 adults, randomized equally: 40 to Beta care and 40 to usual care.

The primary outcome was time from order entry to medicine delivery.

Eligibility

Participants were recruited at one community clinic.

All participants provided written consent before assignment.

Synthetic Study Beta - Results

In Beta care, median delivery time was 21 minutes (IQR 16-26).

In usual care, median delivery time was 28 minutes (IQR 22-34).
